

Vulnerability Management

Identify security vulnerabilities, define risks, strengthen security.

Our vulnerability management provides you with daily transparency about security vulnerabilities, prioritizes risks based on criticality, and helps you close weaknesses quickly and in an audit-ready manner.

Goal

- Maximum transparency across all relevant vulnerabilities — with clear priorities, fast remediation, and audit-ready documentation.

Your Benefits

- **Daily updates:** Vulnerabilities remain up to date through continuous comparisons.
- **Risk-oriented prioritization:** Focus on what is business-critical.
- **Business-aligned classification:** Based on presentation and impact on the business.
- **Integrated risk management:** Unresolvable risks flow into the risk analysis.
- **Audit readiness:** Monthly reports serve as evidence for audits and certifications.

The Three Core Aspects of Our Service

Continuous Vulnerability Management: Security that grows stronger every day and transparency that simplifies decision-making.

Risk-based Classification & Prioritization: Assessment based on criticality, business impact, and SLAs.

Continuous Monitoring & Reporting: Monthly audit-ready reports and clear recommendations for action.

Our Impact

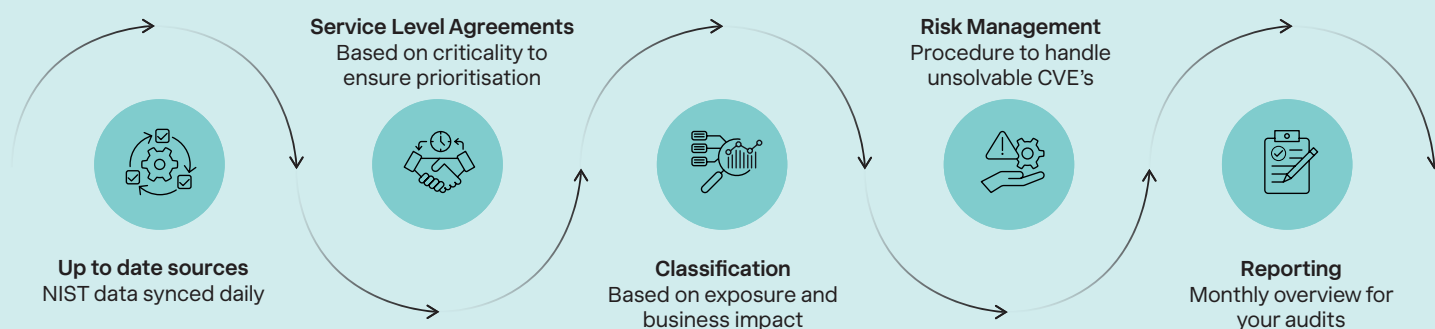

We record and prioritize your vulnerabilities based on SLAs and business impact. We follow ISO/IEC 27001, BSI IT-Grundschutz, and NIS2; unresolvable risks flow into your risk analysis. Monthly reports directly support your audits.

Why Act Now?

Companies today face a constantly growing number of cyber threats — and untreated vulnerabilities remain one of the most common entry points. For any organization aiming to measurably improve its IT security, consistent vulnerability management is essential. Those who scan early, prioritize, and close gaps before they can be exploited reduce effort, risk, and cost — while remaining audit-ready.

Our service: Continuous Vulnerability Management — for security that grows stronger every day and transparency that simplifies decisions.

Your Path to Transparency

Frequently Asked Questions (FAQ)

How often do you perform vulnerability scans, and how transparent are the results for us?

Vulnerability scans are performed daily. For each identified vulnerability, the classification by criticality is documented via a ticket. If needed, the customer can receive a report of all processed tickets...

Which real attacks or incidents does the vulnerability management prevent?

Through the assessment, vulnerabilities that affect systems and are actively exploited are rated very highly. Depending on severity, the maintenance window is moved forward in coordination with the customer. This allows vulnerabilities to be closed more quickly and attacks prevented...

How often do you perform vulnerability scans, and how transparent are the results to us?

Certification audits according to ISO 27001, NIS2, and TISAX are supported with the reports. Supplier management audits can also benefit from this...

Unlock your full potential

Unlock your full potential - with Vulnerability Management for maximum security with minimal efforts.
