

GxP Report Generator

With GxP Report Generator, it is possible to configure all the reports needed for investigations, monitoring and data analytics. GxP Report Generator simplifies and speeds up the analysis of all data of a site, with the goal to generate clear and accurate reports.

This software allows the creation of dashboard and report template for all data of a site, that can be collected from different types and number of data sources, like relational database (Oracle, SQL Server, PostgreSQL, My SQL) or historian (AVEVA PI/ GE historian), merging and displaying all the data in a unique output.

Features

Configuration

Configure the security settings, language, reports, queries and all the parameters of the software.

Equipment

Use the same report for different equipment or with different settings.

Query

Use the same template (query, connection...) configuration with parameters of prefer unit.

Routing Notice

Everything that is configured in the tool must be approved in order to be effective and be visible through the viewer tool.

Report

Each report can be tested before finalizing it, giving the possibility to understand the layout of the report once it will be used.

Viewer

The final user can analyze data of the site such as a reports in table format.
