

Success Story

Healthmark Industries: Digitale, papierlose Fertigung

Intro / Background

Since 1969, Healthmark Industries has been developing and marketing innovative solutions that support healthcare facilities in safely supplying patients with surgical instruments and other life-saving medical products. The portfolio includes products for effective cleaning, validation and verification processes, packaging and accessories for sterilization, as well as tools for identifying and securing critical materials. Healthmark positions itself as a leading provider of innovative and cost-efficient solutions for instrument care and infection control.

Challenge

The production of medical equipment requires a **large number of documents, drawings, inspection records and production-related documentation**. Ensuring secure availability, structured storage and compliant archiving of this information involved significant manual effort. The objective was to provide **all relevant information digitally, directly within the production process**, while significantly reducing the administrative workload for shop-floor employees.

Solution

With the implementation of **Manufacturing Manager**, Healthmark established a fully integrated digital solution that provides **all production-related information directly at the workplace**. The solution supports operators in executing their tasks and ensures that **all relevant data is captured and posted to SAP in real time**.

Implementation / Technical realization

Workstations were equipped with tablets and scanners to enable paperless manufacturing. Employees can **access production documents, record inspection results and report production times and quantities directly** at the shop floor. A new qualification concept ensures that individual process steps can **only be performed by appropriately qualified personnel**. As both processes and user interfaces were available as standard features of the Manufacturing Manager, the project was successfully implemented within **just a few months**.

Benefits & Facts

- Paperless access to **all production-relevant documents**
- **Real-time recording** of inspections, quantities and deviations
- **Reduced administrative workload** for operators
- Improved **data quality and transparency**
- **Direct SAP postings** by operators **at the workplace**

Conclusion & Outlook

Following the successful implementation of the core functions, further expansion steps are planned. These include the **integration of logistics processes such as material withdrawals and the connection of external tools**. After completing the initial test phase, the Manufacturing Manager will be **rolled out to additional production areas**.

Quote

“By capturing inspection steps, quantities and deviations directly at the source, the Manufacturing Manager has significantly improved accuracy, accountability and overall workflow planning across our department.”

Michael Landis
Supervisor Manufacturing (Production)

Unlock your full potential

with Manufacturing Manager as a control tool for transparency and efficiency.

Contact Information:

Orise Digital GmbH, Rheinwaldstraße 38, 78628 Rottweil
+49 741 174416 600
service.DE-ROT@orise.com

As part of the Orise brand, we support manufacturing companies on their journey of digital transformation. Our services range from process planning and optimization to operating models (SAP and non-SAP) and S/4HANA projects, as well as business intelligence, proprietary add-ons, and cloud products. Our focus is on lean principles, SAP standards, and AI readiness. With agility and a collaborative approach, we create sustainable added value and help our clients unlock their full potential – with a personal touch and technological strength.
